
Command Reference: Add()

Add one or more time series to a time series (or ensemble)

Version 08.15.00, 2008-05-04

The Add () command adds regular interval time series. The receiving time series will be set to the sum of itself and all indicated time series. See also the NewTimeSeries () command, which can create an empty time series to receive a sum. If an ensemble is being processed, another ensemble can be added, a single time series can be added to all time series in the ensemble, or a list of time series can be added to the ensemble (the number in the list must match the number of time series in the ensemble).

This command will generate an error if the time series do not have compatible units. If the units are compatible but are not the same (e.g., IN and FT), then the units of the part will be converted to the units of the sum before addition. Missing data in the parts can be ignored (do not set the sum to missing) or can result in missing values in the sum. The user should consider the implications of ignoring missing data. Time series being added must have the same data interval.

The following dialog is used to edit the command and illustrates the syntax of the command.

Edit Add() Command

Add one or more time series to a time series (or ensemble of time series). The receiving time series (or ensemble) is modified. The time series to be added are selected using the AddTSList parameter:

- AllMatchingTSID - add all previous time series with matching identifiers.
- AllTS - add all previous time series.
- EnsembleID - add all time series for the ensemble.
- LastMatchingTSID - add the last time series (before this command) with matching identifier.
- SelectedTS - add time series selected with SelectTimeSeries() commands
- SpecifiedTSID - add time series selected from the list below

Time series to receive results: 0100501.DWR.DivTotal.Month

Ensemble to receive results:

Time series to add (AddTSList): SpecifiedTSID Indicates the time series to process (default=AllTS).

Add TSID (for TSList=AllMatchingTSID): 0100503.DWR.DivTotal.Month

Add EnsembleID (for AddTSList=EnsembleID):

Add specified TSID (for AddTSList=SpecifiedTSID): 0100501.DWR.DivTotal.Month
0100503.DWR.DivTotal.Month

Handle missing data how?: IgnoreMissing

Command:
Add(TSID="0100501.DWR.DivTotal.Month",AddTSList=SpecifiedTSID,AddTSID="0100503.DWR.DivTotal.Month",HandleMissingHow="IgnoreMissing")

Cancel OK

Add

Add() Command Editor

The command syntax is as follows:

```
Add(Parameter=Value,...)
```

Command Parameters

Parameter	Description	Default
TSID	The time series identifier or alias for the time series to receive the sum.	TSID or EnsembleID must be specified.
EnsembleID	The ensemble to receive the sum, if processing an ensemble.	TSID or EnsembleID must be specified.
AddTSList	Indicates how the list of time series is specified, one of: <ul style="list-style-type: none"> AllTS – all time series before the command. AllMatchingTSID – all time series that match the AddTSID (single TSID or TSID with wildcards) will be added. EnsembleID – the time series from ensemble will be added. LastMatchingTSID – the last time series that matches the TSID (single TSID or TSID with wildcards) will be added. SelectedTS – the time series are those selected with the SelectTimeSeries() command. SpecifiedTSID – the specified list of time series given by the AddTSID parameter. If using version 8.02.00 or earlier, use SpecifiedTS. 	AllTS (the time series receiving the sum will not be added to itself)
AddTSID	If the AddTSList parameter is SpecifiedTSID, provide the list of time series identifiers (or alias) to add, separated by commas. If the AddTSList parameter is AllMatchingTSID, specify a single TSID or a TSID with wildcards.	Must be specified if TSList= SpecifiedTSID, ignored otherwise.
AddEnsembleID	If the EnsembleID parameter is specified, providing an ensemble ID will add the ensembles.	Use if an ensemble is being added to another ensemble.
HandleMissingHow	Indicates how to handle missing data in a time series, one of: <ul style="list-style-type: none"> IgnoreMissing – create a result even if missing data are encountered in one or more time series – this option is not as rigorous as the others SetMissingIfOtherMissing – set the result missing if any of the other time series values is missing SetMissingIfAnyMissing – set the result missing if any time series value involved is missing 	IgnoreMissing

A sample commands file to add two time series from the State of Colorado's HydroBase is as follows:

```
# 0100501 - EMPIRE DITCH
0100501.DWR.DivTotal.Month~HydroBase
# 0100503 - RIVERSIDE CANAL
0100503.DWR.DivTotal.Month~HydroBase
add(TSID="0100501.DWR.DivTotal.Month",TSList="SpecifiedTSID",
AddTSID="0100503.DWR.DivTotal.Month",HandleMissingHow=IgnoreMissing)
```
