
Appendix: Colorado Satellite Monitoring System (SMS) Input Type

2010-03-03

Overview

The State of Colorado's Satellite Monitoring System (SMS) database stores observations, configuration information, processed data, and alarms, related to field observations collected from real-time stations throughout the State of Colorado. This database has links to HydroBase (see the **HydroBase Input Type Appendix**).

The database is currently only used to provide alarm information, for use as annotations on real-time data from HydroBase. In the future, additional capability may be added to read raw and processed time series from the Colorado SMS database.

See also the **ColoradoWaterSMS Input Type** appendix, which uses a web service to provide access to real-time streamflow and other data types.
