
Command Reference: `/*`

Comment block start

Version 10.12.00, 2011-09-10

The `/*` command starts a multi-line comment block and is useful for inserting long comments or temporarily commenting out blocks of commands. See also the `*/` and `#` commands. Commands between the `/*` and `*/` are not converted to comments but are skipped during processing. See also the `#` comment documentation for information about comment `@` annotations.

The following dialog is used to edit the command and illustrates the command syntax:

The command syntax is as follows:

```
/*
```

A sample command file is as follows:

```
/*  
SomeCommentedOutCommands () ...  
*/
```
