Command Reference: SelectTimeSeries()

Select time series for additional processing

Version 10.26.00, 2013-12-07

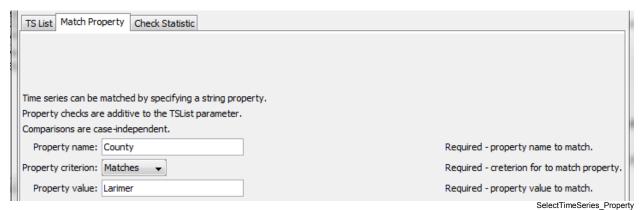

The SelectTimeSeries () command selects output time series, as if done interactively, to indicate which time series should be operated on by following commands. The command minimizes the need for the Free () command because other commands that operate on a time series list can use TSList=SelectedTS. See also the DeselectTimeSeries () command.

The following dialog is used to edit the command and illustrates the command syntax for selecting time series using the TSList parameter. This parameter provides the initial filter for the list of time series. In addition to standard TSList parameter values, the TSPosition value is specific to this command.

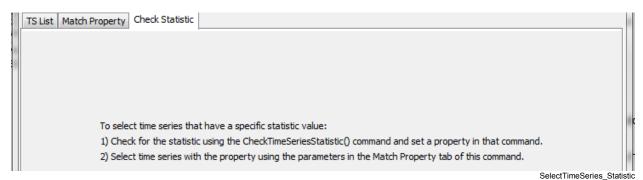

SelectTimeSeries() Command Editor

The following dialog illustrates how to select time series by matching a string property.

SelectTimeSeries() Command Editor Specifying a Property to Match

The following dialog illustrates how to select time series by evaluating a time series statistic.

SelectTimeSeries() Command Editor Specifying a Statistic to Check

The command syntax is as follows:

SelectTimeSeries (Parameter=Value, ...)

Command Parameters

Parameter	Description	Default
TSList	Indicates the list of time series to be	AllTS
	processed, one of:	
	 AllMatchingTSID - all time 	
	series that match the TSID (single	
	TSID or TSID with wildcards)	
	will be modified.	
	• AllTS – all time series before the	
	command.	
	• EnsembleID – all time series in	
	the ensemble will be modified	
	(see the EnsembleID	
	parameter).	
	 LastMatchingTSID - the last 	

A sample command file is as follows:

```
NewPatternTimeSeries (Alias="401234", NewTSID="401234..Precip.Day",

Description="Example data", SetStart="2000-01-01", SetEnd="2000-12-31",

Units="IN", PatternValues="0,1,3,0,0,0")

SelectTimeSeries (TSList=AllMatchingTSID, TSID="40*", DeselectAllFirst=True)
```
