Command Reference: TS Alias = NewStatisticYearTS()

Create a new yearly time series containing a statistic determined from each year of another time series

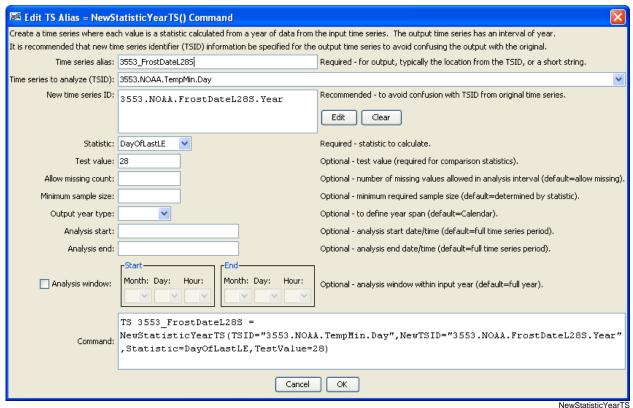

Version 09.05.03, 2009-11-17

The TS Alias = NewStatisticYearTS() command creates a new yearly time series, where each yearly value in the resulting time series contains a statistic determined from the sample of points from the corresponding year in the original time series. For example, if the original time series has a daily time step, then the sample that is analyzed will contain 365 or 366 values (depending on leap year). Calendar years are used by default; however, the OutputYearType parameter can be used to specify that different year types are analyzed. Other commands (e.g., ChangeInterval()) can produce a similar result for a limited number of statistics, for example converting a monthly time series to an annual total or mean. See also the NewStatisticTimeSeries(),

NewStatisticTimeSeriesFromEnsemble(), and CheckTimeSeries() commands.

For hourly and finer interval, values are considered to be in a year when the year in the date/time matches the year of interested. This may lead to some issues if the last value in a year is actually recorded at hour 0 or later of the following year.

The following dialog is used to edit the command and illustrates the syntax for the command.

TS Alias = NewStatisticYearTS() Command Editor

The command syntax is as follows:

TS Alias = NewStatisticYearTS(Parameter=value,...)

Command Parameters

Parameter	Description	Default
Alias	The alias of the new time series, which can be used	None – must be
	instead of the TSID in other commands.	specified.
TSID	The time series identifier (or alias) of the time	None – must be
	series to analyze.	specified.
NewTSID	The time series identifier to be assigned to the new	Use the same
	time series, which is useful to avoid confusion with	identifier as the
	the original time series.	original time series,
		with an interval of
		Year and a scenario
		matching the statistic.
Statistic	See the Available Statistics table below.	None – must be
		specified.
TestValue	A test value used when analyzing the statistic.	This parameter is
		required for some
		statistics and not used
		for others. See the
		statistics table below.
AllowMissingCount	The number of missing values allowed in the	Allow any number of
	source interval(s) in order to produce a result. If an	missing values.
	analysis window is specified (default is to analyze	
	full years), then missing values outside of the	
	analysis window are not considered as missing.	
	Gaps at the end of the time series will be	
MinimumSampleSize	considered missing if within the analysis window.	NT ' '
MITITIIIUIIISAIIIPIESIZE 	The minimum sample size in order to compute the	No minimum,
	statistic.	although the statistic
		may have
OutputYearType	The output year type. For example, an output year	requirements. Calendar
Outputieallype	type of NovToOct spans November of the	Calendar
	previous calendar year to October of the current	
	calendar year. All other parameters should still be	
	specified in calendar year and the	
	AnalysisWindowStart can have a month that	
	is prior to the AnalysisWindowEnd month.	
AnalysisStart	The starting date/time for the analysis using	Analyze the full
	calendar dates (e.g., 2001-01-01), with precision	period, extending the
	consistent with the time series interval. This will	period to include full
	limit the data being analyzed at the ends of the time	years.
	series and controls the length of the output time	
	series. The analysis period is typically set to align	
	with years consistent with the output year type.	
AnalysisEnd	The ending date/time for the analysis using	Analyze the full

calendar dates (e.g., 2001-01-01), with precision		period, extending the
	consistent with the time series interval. This will	period to include full
	limit the data being analyzed at the ends of the time	years.
	series and controls the length of the output time	
	series. The analysis period is typically set to align	
	with years consistent with the output year type.	
AnalysisWindowStart	The calendar date/time for the analysis start within	Analyze the full year.
	each year. Specify using the format MM, MM-DD,	
	MM-DD hh, or MM-DD hh: mm, consistent with	
	the time series interval precision. A year of 0000	
	will be used internally to parse the date/time. Use	
	this parameter to limit data processing within the	
	year, for example to analyze only a season. Data	
	will be considered missing only if missing within	
	this analysis window. If specifying for other than	
	calendar year, the analysis window start month may	
	be greater than the analysis window end month.	
AnalysisWindowEnd	Specify date/time for the analysis end within each	Analyze the full year.
	year. See AnalysisWindowStart for details.	

Available Statistics

The following statistics are computed from a sample determined using the analysis window. If no analysis window is specified, then the default is to analyze complete years, where the years correspond to the OutputYearType. For example, for OutputYearType=NovToDec, November 1, 2000 to October 31, 2001 from the input corresponds to output year 2001.

Statistic	Description	Limitations
DayOfFirstGE	ayOfFirstGE Julian day of the year (1-366, relative to the start	
	of the OutputYearType) for the first data	daily or smaller interval.
	value >= TestValue. Searches start at the	
	start of the analysis window and move forward.	
DayOfFirstGT	Similar to DayOfFirstGE, for values >	Input time series must be
	TestValue.	daily or smaller interval.
DayOfFirstLE	Similar to DayOfFirstGE, for values <=	Input time series must be
	TestValue.	daily or smaller interval.
DayOfFirstLT	Similar to DayOfFirstGE, for values <	Input time series must be
	TestValue.	daily or smaller interval.
DayOfLastGE	Julian day of the year (1-366, relative to the start	Input time series must be
	of the OutputYearType) for the last data value	daily or smaller interval.
	>= TestValue. Searches start at the start of	
	the analysis window and move backward.	
DayOfLastGT	Similar to DayOfLastGE, for values >	Input time series must be
	TestValue.	daily or smaller interval.
DayOfLastLE	Similar to DayOfLastGE, for values <=	Input time series must be
	TestValue.	daily or smaller interval.
DayOfLastLT	Similar to DayOfLastGE, for values <	Input time series must be
	TestValue.	daily or smaller interval.
DayOfMax	Julian day of the year (1-366, relative to the start	Input time series must be

	TestValue.	monthly or smaller	
		interval.	
MonthOfLastGE	Month of the year (1-12, relative to the start of the	Input time series must be	
	OutputYearType) for the last data value >=	monthly or smaller	
	TestValue. Searches start at the end of the	interval.	
	analysis window and move backward.		
MonthOfLastGT	Similar to DayOfLastGE, for values >	Input time series must be	
	TestValue.	monthly or smaller	
		interval.	
MonthOfLastLE	Similar to DayOfLastGE, for values <=	Input time series must be	
	TestValue.	monthly or smaller	
		interval.	
MonthOfLastLT	Similar to DayOfLastGE, for values <	Input time series must be	
	TestValue.	monthly or smaller	
		interval.	
MonthOfMax	Month of the year (1-12, relative to the start of the	Input time series must be	

Statistic	Description	Limitations
	OutputYearType) for the first maximum value	monthly or smaller
	in the time series.	interval.
MonthOfMin	Month of the year (1-12, relative to the start of the	Input time series must be
	OutputYearType) for the first minimum value	monthly or smaller
	in the time series.	interval.
Total	Total of values in a year.	

Examples

The following example commands file computes the last spring frost date for 28 degrees and 32 degrees, searching backwards from June 30 each year, and the first fall frost date for 32 and 28 degrees, searching forwards from July 1 each year:

```
StartLog(LogFile="FrostDates_HydroBase.log")
SetOutputPeriod(OutputStart="1950-01",OutputEnd="2004-12")
# 3553 - GREELEY UNC
3553.NOAA.TempMin.Day~HydroBase
TS 3553_FrostDateL28S = NewStatisticYearTS(TSID="3553.NOAA.TempMin.Day",
 NewTSID="3553.NOAA.FrostDateL28S.Year",
  Statistic=DayOfLastLE, TestValue=28,
  SearchStart="06/30")
TS 3553_FrostDateL32S = NewStatisticYearTS(TSID="3553.NOAA.TempMin.Day",
 NewTSID="3553.NOAA.FrostDateL32S.Year",
 Statistic=DayOfLastLE, TestValue=32,
 SearchStart="06/30")
TS 3553_FrostDateF32F = NewStatisticYearTS(TSID="3553.NOAA.TempMin.Day",
  NewTSID="3553.NOAA.FrostDateF32F.Year",
  Statistic=DayOfFirstLE, TestValue=32,
  SearchStart="07/01")
TS 3553_FrostDateF28F = NewStatisticYearTS(TSID="3553.NOAA.TempMin.Day",
 NewTSID="3553.NOAA.FrostDateF28F.Year",
  Statistic=DayOfFirstLE, TestValue=28,
  SearchStart="07/01")
Free(TSID="*.*.TempMin.*")
writeStateCU("Results/Test.FrostDates")
```
