Command Reference: WriteReclamationHDB()

Write a time series to a Reclamation HDB database

Version 10.19.00, 2013-03-15

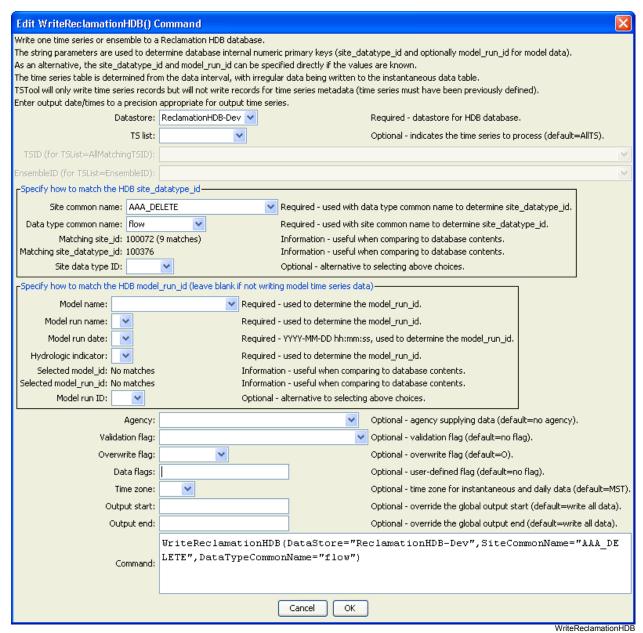

The WriteReclamationHDB() command writes time series to a Reclamation HDB database:

- a single time series (which can be part of an ensemble), indicated by its time series identifier
- all time series in an ensemble, indicated by its ensemble identifier

See the **Reclamation HDB Data Store Appendix** for more information about the database features and limitations. The command will not define a new time series but will update the data records for an existing time series. The time series interval is used to determine the time series table to write, with irregular data being written as instantaneous data with date/time precision to minute. The time series is written to a model time series table if model parameters are specified. The HDB "write_to_hdb" stored procedure is used to write the data. Limitations of this command are as follows:

- 1. Missing data currently are not written. By convention missing values in HDB are simply not included in the database. Currently the command will not delete previous records if the new value at a date/time is missing.
- 2. Data units in the time series are not checked against data units in the database because the units in TSTool data may originally have come from various sources that do not use the same units abbreviations as HDB. It is the user's responsibility to ensure that time series that are being written have units that are compatible with HDB.
- 3. Time zone can be indicated in TSTool time series by including in the start and end date/time information; however, time zones are difficult to standardize when data comes from different sources. The default time zone for HDB is configured for the Reclamation office that uses the database. If the time series time zone is different from the default (see the command dialog note for the TimeZone parameter), it can be specified as a command parameter. It is the user's responsibility to verify that the correct time zone is being used.
- 4. Data flags from the time series are not written to the database. The ValidationFlag, OverwriteFlag, and DataFlags parameters are provided to specify HDB flags. Additional capability may be added in the future.
- 5. TSTool treats year-interval data generically and does not manage water year (or other types of years) in special fashion, other than when processing data into year interval time series. Water year data can be saved in year interval data but currently there is no way to write to the water-year tables in HDB.
- 6. Writing model data currently must specify the ModelRunID parameter directly. Additional testing is needed to ensure that the editor dialog choices cascade properly, even when some null/blank fields exist in the model run definitions.
- 7. Hourly data in TSTool are shifted earlier one hour prior to writing, due to HDB data management conventions.
- 8. The ability to write an ensemble is under development.

The following dialog is used to edit the command and illustrates the syntax of the command.

WriteReclamationHDB() Command Editor

The command syntax is as follows:

WriteReclamationHDB (Parameter=Value,...)

Command Parameters

Parameter	Description	Default
DataStore	The identifier for the ReclamationHDB data store to use for	None – must be
	the database.	specified.
TSList	Indicates the list of time series to be processed, one of:	AllTS
	AllMatchingTSID – all time series that match the	
	TSID (single TSID or TSID with wildcards) will be	
	processed.	
	• AllTS – all time series before the command.	
	• EnsembleID – all time series in the ensemble will be	
	processed. This is not yet enabled for the new HDB	
	ensemble design.	
	• FirstMatchingTSID – the first time series that	
	matches the TSID (single TSID or TSID with wildcards)	
	will be processed.	
	• LastMatchingTSID – the last time series that	
	matches the TSID (single TSID or TSID with wildcards)	
	will be processed.	
	• SelectedTS – the time series are those selected with	
mo T D	the SelectTimeSeries () command. The time series identifier or alias for the time series to be	Dogwins d.if
TSID	processed, using the * wildcard character to match multiple	Required if TSList=*TSID.
	time series.	ISLISU-"ISID.
EnsembleID	The ensemble to be processed, if processing an ensemble.	Required if TSList=
	F THE STATE	EnsembleID.
Site	The site common name for the time series location; used with	None – must be
CommonName	the data type common name to determine the site datatype id	specified unless
	in the database.	SiteDataTypeID is
		specified.
DataType	The data type common name for the time series; used with	None – must be
CommonName	the site common name to determine the site_datatype_id in	specified unless
	the database.	SiteDataTypeID is
		specified.
SiteDataTypeID	The site_datatype_id value to match the time series. If	
	specified, the value will be used instead of the	
	site_datatype_id determined from SiteCommonName and	
ModelName	DataTypeCommonName. The model name for the time series; used with the model run	None – must be
	name, hydrologic indicator(s), and model run date to	specified unless
	determine the model run id in the database.	ModelRunID is
		specified.
ModelRunName	The model run name for the time series; used with the model	None – must be
	name, hydrologic indicator(s), and model run date to	specified unless
	determine the model_run_id in the database.	ModelRunID is
		specified.
ModelRunDate	The model run date (timestamp) to use for the time series;	None – must be
	used with the model name, model run name, and hydrologic	specified unless
	indicator(s) to determine the model_run_id in the database.	ModelRunID is

Parameter	Description	Default
		specified.
Hydrologic	The hydrologic indicator(s) to use for the time series; used	None – must be
Indicator	with the model name, model run name, and model run date to	specified unless
1	determine the model_run_id in the database.	ModelRunID is
		specified.
ModelRunID	The model_run_id value to match the time series. If	
	specified, the value will be used instead of the model_run_id	
	determined from ModelName, ModelRunName,	
	ModelRunDate, and HydrologicIndicator.	
Agency	The agency abbreviation (e.g., USBR) for data records written	No agency is indicated
	to the database.	in database.
Validation	HDB validation flag. Only uppercase characters are	No flag is used.
Flag	supported.	
OverwriteFlag	HDB overwrite flag.	Overwrite (enforced by
		HDB stored
		procedure)
DataFlags	User-defined flags, up to 20 characters.	No flags are used.
TimeZone	Three-letter time zone abbreviation for the data records	Default HDB time zone
	written to the database.	is assumed.
OutputStart	The date/time for the start of the output.	Use the global output
		period.
OutputEnd	The date/time for the end of the output.	Use the global output
		period.
